

## **FINAL REPORT - ANNEX 2**

### **Preliminary Forum Electronic Meeting Report**

As programmed, the Forum Electronic Meeting, restricted to registered participants, took place between June 2 and 13, 2008.

Having as background a number of questions that were raised (and distributed), the main objectives for the Forum were those of:

- Hearing participants about further possible questions to be raised
- Sharing in advance some reflections that may improve discussion during the meeting

There were 289 visits to the site, an interesting number, even if only thinking of promoting the use of this type of tools for future utilization.

Though there was not much discussion and interaction, still it is expected that, through these visits, delegates to the Seminar are now already conversant with the issues raised for discussion in the Seminar itself.

A few questions were raised, that should be added to those that were set in advance:

How does the relevance of student centered learning increases from first to third cycle?

What is the concept of "Integrated Examination" in Adult Education? How can we explore such concept to foster the important link between Learning Outcomes (LO) and Assessment Procedures?

About the implications of LO in National Qualifications Frameworks, Recognition of Qualifications and Quality Assurance:

Is there a difference on the way to work with these objectives in the two subsystems of a binary system?

How can we improve the Recognition of Prior Learning in the so-called Research Universities?

Overall,

It is really important that we take in full consideration the conclusions approved in the two Seminars that took place in Edinburgh and Moscow, early this year, and that we try to find answers to all these questions, old and new, raised.

Sebastião Feyo de Azevedo
